

Role Name : AI Enablement/ Integration Intern

Duration : 3 Months

Total Vacancies : 2

Reporting To : Office of the President & Country Head

About the Role

We are seeking curious, hands-on, and technically exceptional AI Enablement Interns from premier engineering institutions to support the integration of Artificial Intelligence capabilities into our existing in-house software systems. Selected interns will work directly with the Office of the President and Country Head, contributing to high-impact AI implementation initiatives and live business projects.

This role is ideal for individuals who are at the forefront of AI/ML advancements, possess excellent knowledge of emerging AI tools and technology stacks, and are eager to apply that expertise to solve real business problems through automation, LLM integration, and digital transformation.

Objective of the Role

The primary goal of this internship is to help the organization embed AI-driven functionality into current internal applications, workflows, and tools in a practical, scalable, and secure manner – directly supporting the company’s strategic AI implementation roadmap as defined by senior leadership.

Responsibilities

- **Strategic AI Planning Support**
 - Collaborate with the Office of the President and Country Head to map out the company’s AI implementation roadmap and prioritize high-value use cases.
 - Work with internal stakeholders across business units to understand existing workflows, pain points, and automation opportunities.
 - Research and benchmark the latest AI tools, platforms, and technology stacks relevant to the organization’s industry and objectives.
 - Help document AI use cases, expected outcomes, risks, implementation feasibility, and ROI estimates.
- **AI Feature Prototyping and Enablement**
 - Design and build proof of concepts (POCs) for AI-enabled features within existing software systems, leveraging cutting-edge tools and frameworks.
 - Support integration of AI services and APIs (including LLMs, generative AI, computer vision, and NLP tools) into internal applications.
 - Evaluate and recommend the most suitable AI platforms, models, and stacks (e.g., OpenAI, Anthropic, Hugging Face, LangChain, vector databases) for specific use cases.
- **Live Project Execution**
 - Actively contribute to live AI implementation projects under the guidance of the President’s office.
 - Deliver working prototypes, integrations, or automation scripts within defined project timelines.
 - Present progress updates, findings, and recommendations to senior stakeholders.

- **Software Integration Support**
 - Collaborate with software developers to embed AI functionality into current applications without disrupting business operations.
 - Support backend and frontend teams in integrating AI modules, API calls, prompt pipelines, and output handling logic.
 - Participate in debugging issues related to AI features, data inputs, model outputs, and user interaction flows.
- **Prompt Engineering and Model Optimization**
 - Create, refine, and test prompts for AI-assisted workflows and enterprise applications.
 - Evaluate response quality, relevance, consistency, and usability of AI-generated outputs.
 - Define guardrails, fallback logic, and output formatting standards aligned with business requirements.
- **Data Preparation and Validation**
 - Assist in collecting, cleaning, organizing, and structuring internal data required for AI features.
 - Support the creation of datasets, sample inputs, and test scenarios for model evaluation and benchmarking.
 - Ensure data quality, consistency, and relevance for AI use cases.
- **Documentation and Knowledge Sharing**
 - Prepare documentation for AI features, workflows, testing scenarios, integration logic, and limitations.
 - Document implementation learnings, business impact assessments, and recommendations for further improvement.
 - Create user guides and internal knowledge notes for teams adopting AI-enabled features.
- **Quality Assurance and Performance Evaluation**
 - Support testing of AI outputs across multiple scenarios, edge cases, and stress conditions.
 - Benchmark AI model performance against defined KPIs and recommend improvements.
- **Governance, Compliance, and Responsible AI Support**
 - Follow company policies on data privacy, confidentiality, and information security while working with internal tools and data.
 - Ensure AI-enabled features are aligned with responsible AI usage practices and ethical guidelines.
 - Escalate risks related to model outputs, sensitive data exposure, bias, or unreliable automation to appropriate stakeholders.

Required Qualifications

- Currently pursuing a degree (B.Tech / B.E. / M.Tech / M.S.) from a premier engineering institution in:
 - Computer Science / Information Technology
 - Artificial Intelligence / Machine Learning / Data Science
 - Software Engineering or related disciplines
- Excellent, up-to-date knowledge of modern AI tools, frameworks, and technology stacks (mandatory).
- Demonstrated familiarity with LLMs and generative AI platforms such as OpenAI GPT, Anthropic Claude, Google Gemini, or open-source alternatives.
- Hands-on experience or strong understanding of AI/ML frameworks: LangChain, LlamaIndex, Hugging Face Transformers, vector databases (Pinecone, Weaviate, FAISS), and RAG architectures.

- Proficiency in at least one programming language – Python (preferred), JavaScript, Java, or C#.
- Solid understanding of REST APIs, software integration concepts, and application workflows.
- Familiarity with databases, data structures, and basic cloud infrastructure (AWS / Azure / GCP is a plus).
- Strong analytical and problem-solving ability with a proactive, self-driven attitude.
- Excellent written and verbal communication skills – ability to present technical concepts clearly to senior leadership.
- High degree of ownership, intellectual curiosity, and eagerness to stay current with the rapidly evolving AI landscape.
- Ability to work in a fast-paced, collaborative environment and manage multiple priorities.

Note: Shortlisted candidates may be required to complete a technical assessment or present an AI project/prototype as part of the selection process.
